```

The image shows a Visual Studio Code editor window with a Python file named `login.py` open. The code is a Flask web application for user login and registration. It uses Flask, SQLAlchemy, and Jinja2. The application connects to a database and handles login and register routes. The interface includes a sidebar with icons, a top menu bar, and a status bar at the bottom.

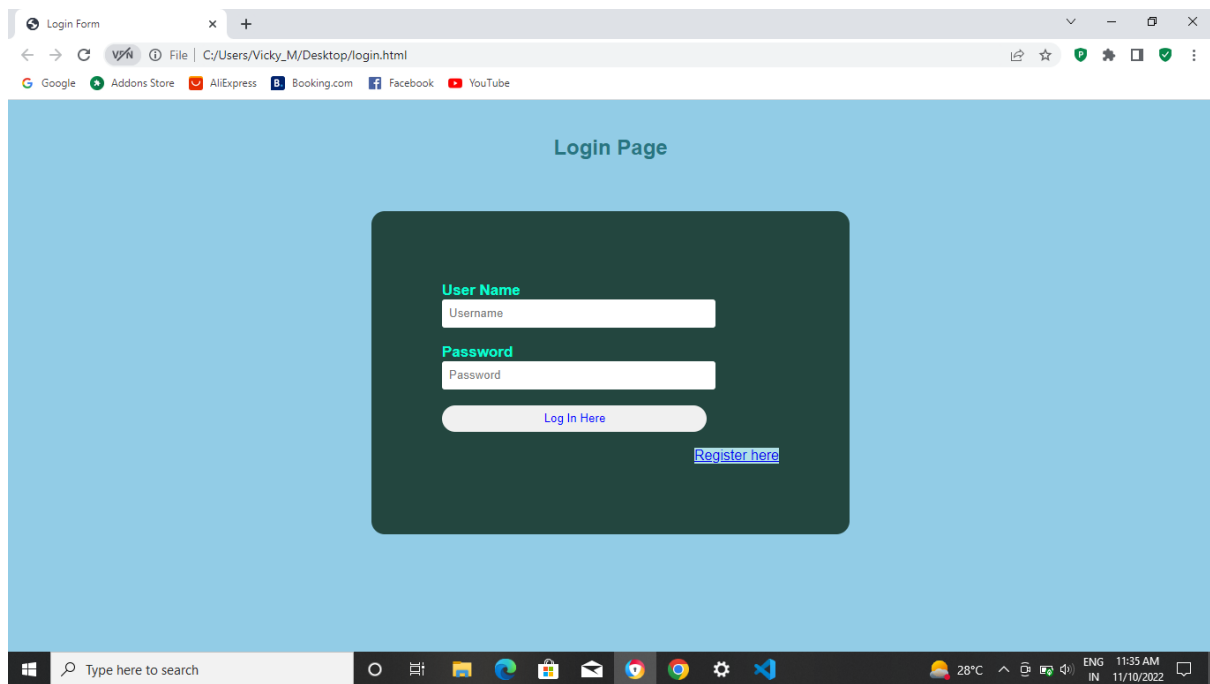

```
C:\Users> sandhya > Desktop > flask > login.py
1 from email.mime import image
2 from flask import Flask, render_template, request, redirect, url_for, session
