            <h2>ABOUT US</h2>
        <h1>INVENTORY MANAGEMENT SYSTEM FOR RETAILERS</h1>
        </center>
        <div class="flp">
        <p>
            Retail inventory management is the process of ensuring you carry
merchandise that shoppers want, with neither too little nor too much on hand.
By managing inventory, retailers meet customer demand without running out of
stock or carrying excess supply.<br><br>

In practice, effective retail inventory management results in lower costs and
a better understanding of sales patterns. Retail inventory management tools
and methods give retailers more information on which to run their businesses.
Applications have been developed to help retailers track and manage stocks
related to their own products. The System will ask retailers to create their
accounts by providing essential details. Retailers can access their accounts
by logging into the application.<br><br>

Once retailers successfully log in to the application they can update their
inventory details, also users will be able to add new stock by submitting
essential details related to the stock. They can view details of the current
inventory. The System will automatically send an email alert to the retailers
if there is no stock found in their accounts.  So that they can order new
stock.<br><br>
```
```
